Computer Methods in Applied Mechanics and Engineering 93 (1991) 435–438
North-Holland

# Subject index of Volume 93*

*Boundary element methods*

Validation of the boundary element flexibility approach for elastic contact analysis, S. Takahashi and C.A. Brebbia (2) 151–168

*Dynamics*

A new two-dimensional flux-limited shock viscosity for impact calculation, D.J. Benson (1) 39–95
Stability of variable explicit time integration for unsteady diffusion problems, P. Smolinski (2) 247–252
Finite rotation analysis and consistent linearization using projectors, B. Nour-Omid and C.C. Rankin (3) 353–384

*Finite difference methods*

A new two-dimensional flux-limited shock viscosity for impact calculations, D.J. Benson (1) 39–95
A finite difference simulation of a continuous flow centrifuge, J.W. Frederick, R.J. Ribando and H.G. Wood (3) 401–414

*Finite element and matrix methods*

Approximations of the KdV equation by least squares finite elements, G.F. Carey and Y. Shen (1) 1–11
Multigrid methods and adaptive refinement techniques in elliptic problems by finite element methods, M. Storti, N. Nigro and S. Idelsohn (1) 13–30
A new two-dimensional flux-limited shock viscosity for impact calculations, D.J. Benson (1) 39–95
Preconditioners for high degree elements, E. Barragy and G.F. Carey (1) 97–110
A finite element scheme based on the simplified Reissner equations for shells of revolution, D. Givoli and L. Rivkin (1) 111–124
Stress analysis of axisymmetric extrusion in the presence of strain-induced anisotropy modeled as combined isotropic–kinematic hardening, Y.S. Suh, A. Agah-Tehrani and K. Chung (2) 127–150
Adaptive ALE finite elements with particular reference to external work rate on frictional interface, W.K. Liu, J.-S. Chen, T. Belytschko and Y.F. Zhang (2) 189–216

* The issue number is given in front of the page numbers.

The first ANDES elements: 9-dof plate bending triangles, C. Militello and C.A. Felippa (2) 217–246
Finite element solution for advection-dominated thermal flows, J.-M. Grygiel and P.A. Tanguy (3) 277–289
Stiffness matrix integration rules for contact-friction finite elements, X. Qiu, M.E. Plesha and D.W. Meyer (3) 385–399
A shear-flexible facet shell element for large deflection and instability analysis, S. Oral and A. Barut (3) 415–431

*Fluid mechanics*

Multigrid methods and adaptive refinement techniques in elliptic problems by finite element methods, M. Storti, N. Nigro and S. Idelsohn (1) 13–30
Third-order upwind finite element formulations for incompressible viscous flow problems, N. Kondo, N. Tosaka and T. Nishimura (2) 169–187
Finite element solution for advection-dominated thermal flows, J.-M. Grygiel and P.A. Tanguy (3) 277–289

*Gas dynamics*

A finite difference simulation of a continuous flow centrifuge, J.W. Frederick, R.J. Ribando and H.G. Wood (3) 401–414

*Incompressible and near incompressible media*

Third-order upwind finite element formulations for incompressible viscous flow problems, N. Kondo, N. Tosaka and T. Nishimura (2) 169–187

*Kinematics*

Finite rotation analysis and consistent linearization using projectors, B. Nour-Omid and C.C. Rankin (3) 353–384

*Nonlinear mechanics*

A note on the use of the additive decomposition of the strain tensor in finite deformation inelasticity, A.L. Eterovic and K.J. Bathe (1) 31–38
Adaptive ALE finite elements with particular reference to external work rate on frictional interface, W.K. Liu, J.-S. Chen, T. Belytschko and Y.F. Zhang (2) 189–216
Collapse analysis of steel plate by finite strip method, Y.L. Guo and S.F. Chen (3) 319–333
Finite rotation analysis and consistent linearization using projectors, B. Nour-Omid and C.C. Rankin (3) 353–384

Stiffness matrix integration rules for contact-friction finite elements, X. Qiu, M.E. Plesha and D.W. Meyer (3) 385–399
A shear-flexible facet shell element for large deflection and instability analysis, S. Oral and A. Barut (3) 415–431

*Numerical solution procedures*

Preconditioners for high degree elements, E. Barragy and G.F. Carey (1) 97–110
Stability of variable explicit time integration for unsteady diffusion problems, P. Smolinski (2) 247–252

*Optimization and design of structures*

A homogenization method for shape and topology optimization, K. Suzuki and N. Kikuchi (3) 291–318

*Plasticity*

A note on the use of the additive decomposition of the strain tensor in finite deformation inelasticity, A.L. Eterovic and K.J. Bathe (1) 31–38
Stress analysis of axisymmetric extrusion in the presence of strain-induced anisotropy modeled as combined isotropic–kinematic hardening, Y.S. Suh, A. Agah-Tehrani and K. Chung (2) 127–150
Algorithms for the solution of internal variable problems in plasticity, B.D. Reddy and J.B. Martin (2) 253–273

*Shells and plates*

A finite element scheme based on the simplified Reissner equations for shells of revolution, D. Givoli and L. Rivkin (1) 111–124
The first ANDES elements: 9-dof plate bending triangles, C. Militello and C.A. Felippa (2) 217–246
A shear-flexible facet shell element for large deflection and instability analysis, S. Oral and A. Barut (3) 415–431

*Stability in structural mechanics*

Tensile instability in a round bar including the effect of material strain-rate sensitivity, P. Tuğcu (3) 335–351

*Stochastic processes*

Approximations of the KdV equation by least squares finite elements, G.F. Carey and Y. Shen (1) 1–11

*Structural mechanics*

A finite element scheme based on the simplified Reissner equations for shells of revolution, D. Givoli and L. Rivkin (1) 111 – 124
Stress analysis of axisymmetric extrusion in the presence of strain-induced anisotropy modeled as combined isotropic – kinematic hardening, Y.S. Suh, A. Agah-Tehrani and K. Chung (2) 127 – 150
Adaptive ALE finite elements with particular reference to external work rate on frictional interface, W.K. Liu, J.-S. Chen, T. Belytschko and Y.F. Zhang (2) 189 – 216
The first ANDES elements: 9-dof plate bending triangles, C. Militello and C.A. Felippa (2) 217 – 246
Collapse analysis of steel plate by finite strip method, Y.L. Guo and S.F. Chen (3) 319 – 333
Tensile instability in a round bar including the effect of material strain-rate sensitivity, P. Tuğcu (3) 335 – 351

*Transport phenomena*

Finite element solution for advection-dominated thermal flows, J.-M. Grygiel and P.A. Tanguy (3) 277 – 289

*Viscoelastic and viscoplastic media*

Tensile instability in a round bar including the effect of material strain-rate sensitivity, P. Tuğcu (3) 335 – 351

*Viscous flow*

Third-order upwind finite element formulations for incompressible viscous flow problems, N. Kondo, N. Tosaka and T. Nishimura (2) 169 – 187

*Wave motion*

Approximations of the KdV equation by least squares finite elements, G.F. Carey and Y. Shen (1) 1 – 11
